Question 1 (Easy)
According to the Oxford Dictionary (2022), how is the Internet of Things (IoT) defined?
a) A network of objects communicating via the internet with sensors and software (AIOTI definition)
b) The connection of devices within everyday objects via the internet, enabling data sharing
c) Direct communication between devices without human intervention
d) Physical components interconnected to exchange data using any protocol
Answer: b) The connection of devices within everyday objects via the internet, enabling data sharing

---

Question 2 (Medium)
In the comparison between Traditional Internet and IoT, which entity is primarily responsible for content cre
a) Humans
b) Machines
c) Both humans and machines
d) Cloud servers
Answer: b) Machines

Question 3 (Medium)
Which IoT Level is characterized by multiple end nodes sending data to a coordinator node, which then co
a) Level-1
b) Level-3
c) Level-5
d) Level-6
Answer: c) Level-5

Question 4 (Hard)
The use of RFID tags for communication in IoT applications is most closely associated with which domain?
a) Healthcare
b) Transportation
c) Retail
d) Environmental Monitoring
Answer: b) Transportation

Question 5 (Hard)
Which IoT characteristic emphasizes the ability to handle increasing numbers of devices and data efficient
a) Secure
b) Simple
c) Scalable
d) Smart
Answer: c) Scalable
